TriActive®, Inc. – September 10, 2008 – TriActive, a pioneer in SaaS for systems management, announced today that they have signed a Distribution agreement with ECS Computers (Asia) Pte Ltd to provide TriActive's SaaS-powered Systems Management On Demand™ technology to its partners in Singapore.

TriActive offers a modular solution set that enables partners to deliver Managed Services On Demand™ without the need for any form of upfront investment in infrastructure (eg. a NOC), hardware, and software usually required with other On Demand offerings.

The addition of TriActive's solutions provides management capabilities that complement ECS partners' current offerings, enabling them to tap into the significant growth opportunity being experienced by MSPs in Singapore.

TriActive Systems Management On Demand™ solutions provide asset management, patch management, software distribution, software categorization, remote control, service desk, and license compliance to manage each of the PCs within an organization simply via the Internet. This is perfect for highly mobile or distributed workforces.

"We are delighted to partner with TriActive to offer their managed services solutions to our partners and customers in Singapore," said Mr Sebastian Chong, President, ECS Computers (Asia) Pte Ltd. "This partnership extends the breadth of our solution offerings to our customers, especially in the growing Software as a Service (SaaS) space. With TriActive, our partners and customers can now easily have remote monitoring and system management capabilities without the associated hefty capital outlay."

"We are excited to have ECS join us in promoting our Managed Services OnDemand offering to their partners," said Tom Galantomos, TriActive Asia Pacific, MD. "In other parts of the world our Managed Service partners are enjoying margins around 70% and are cash positive from day one as there is no upfront expenditures or commitments with the TriActive white-labeled offering. Our customers and partners only pay for what they use and can be operating their new Managed Services business in 14 days."

TriActive® offers a modular set of solutions and suites that can be provisioned with just a mouse click. The TriActive Desktop Management Suite is the company's most popular suite and includes everywhere-coverage for remote laptops and desktops with functions for asset inventory, associated fixed assets, software utilization, license compliance, software license harvesting, patch management, software delivery, Web-based remote control, help desk incident and problem management with support for tasks, workflow, auto-routing, escalation, and notification. The solutions are fronted by an integrated Web-based executive dashboard and reporting subsystem, meaning for our partners and customers that there is no hardware, software, or database to buy and maintain - ever. Version 7 introduced a brand new Systems and Network Monitoring Suite, which adds SNMP network and local system monitoring with service auto-restart, single-instance system reboot, and automated help desk incident management.
