

# Solaris™ 10 Jumpstart (SA-JS-Sol10, 1 day)

## Course Description

The Solaris(TM) Jumpstart course provides students with the necessary knowledge and skills to get up and running with Solaris 10 on any number of Sun servers and workstations from the time they arrive at a customer location. This course is intended to provide System Integrators, or engineers at Independent Software Vendors software with information about core Solaris concepts. Training is provided in an instructor-led, classroom environment on x86/x64-based systems..

## Who Can Benefit

Students who can benefit from this course should already be familiar with standard system and platform tasks in other operating environments. This course provides the skills necessary to adapt those skills to the Solaris 10 OS environment.

## Prerequisites

To succeed fully in this course, students should be able to:

- Understand basic platform concepts such as setup and installation (Unix, Linux, Windows), inclusive of package and patch administration
- In addition, they will also be taught how to obtain more information on the Solaris 10 platform online

## Skills Gained

Upon completion of this course, students should be able to:

- 1) Briefly articulate and demonstrate key features of the Solaris 10 operating system
- 2) Setup Solaris 10 pre-installed systems
- 3) Install Solaris 10

## COURSE OUTLINE

Module 1 – Introduction to key features

- Solaris 10 Feature Overview
- Getting Started with “Solaris 10 Moves” servers
- Unique Features

Module 2 – Configuration of pre-installed Solaris / Installation

Module 3 – Package and Patch Administration

Module 4 – Solaris 10 help

Module 5 – Driver Support

Module 6 – Courses to Follow
